

Sheraz Ali

Software Engineer

Software Engineer adept at developing designing and installing software solutions. Committed to technological advancement and excellence in each task completed.

Phone: 03177756698

Website: <https://github.com/ali-Sheraz>,
<https://www.linkedin.com/in/sheraz-ali-a760b1250/>

Email: asherazali121823@gmail.com

SKILLS

Programming Languages: HTML/CSS, JavaScript, NodeJS, TypeScript, Kotlin, Java, NestJS

Frameworks: Angular, React, Spring Boot, Express, NestJS

Databases: SQLite/Room, MongoDB, MySQL, H2, Redis, Prisma ORM, Type ORM

Revision Control: Git, Bitbucket.

Software/Tools: Visual Studio Code, IntelliJ IDEA, MYSQL WorkBench, Postman, Jira, Eclipse, Jira, Trello, PG Admin

MicroServices: Spring (using Zuul for defining routes), JWT for Authorization, SSL Security, NestJS CQRS Pattern

Search Engines: Elasticsearch

Application Backend Management: Java web services development, Socket Programming, Maven Projects, Simple and Complex SQLs, Modular & Scalable Backend Architecture, Role-Based Access Control (RBAC), Background Job Processing, Asynchronous Task Handling, Event-Driven Systems, Error Handling & Logging

Amazon Web Services: S3, EC2, Lambda, SQS

AI/LLM Technologies: RAG (Retrieval-Augmented Generation), LLMs (Large Language Models), Prompt Engineering, MCP, Vector Databases (Milvus), Data Ingestion & Retrieval Pipelines, Intent Detection, Multi-Agent AI Systems

Payment: Stripe, Al Rajhi

3rd-Party Integrations: HubSpot, LinkedIn Ads API, ProspectPro, Zoho CRM, ActiveCampaign, Pipedrive, Google Ads, WebinarGeek, MailerLite, Gripp, Routech, Map APIs, Webhooks

EXPERIENCE

Innovation Insight

MARCH 2026 - PRESENT

Full Stack Developer - (MERN)

- Actively contributed to development of web applications using Next.js, React.js, Framer Motion, Material UI, ShadCN, and Tailwind CSS.
- Developed and maintained backend services using Node.js / NestJS, integrated with databases (MongoDB, MySQL, PostgreSQL) and cloud services (AWS S3).
- Collaborated with cross-functional teams including front-end developers, designers, and project leads to implement features and ensure seamless integration.
- Participated in code reviews, debugging, and problem-solving, supporting the overall quality and maintainability of projects.
- Managed deployment of web applications and multiple APIs on AWS EC2, configured Nginx as a reverse proxy, and optimized server performance.

TechVention,UAE (Remote)

MARCH 2025 - FEB 2026

Full Stack Developer - (MERN)

- Actively contributed to development of web applications using Next.js, React.js, Framer Motion, Material UI, ShadCN, and Tailwind CSS.
- Developed and maintained backend services using Node.js / NestJS, integrated with databases (MongoDB, MySQL, PostgreSQL) and cloud services (AWS EC2, S3).
- Collaborated with cross-functional teams including front-end developers, designers, and project leads to implement features and ensure seamless integration.
- Participated in code reviews, debugging, and problem-solving, supporting the overall quality and maintainability of projects.
- Managed deployment of web applications and multiple APIs on AWS EC2, configured Nginx as a reverse proxy, and optimized server performance.

Binarysentinels,Islamabad

JULY 2023 - FEB 2025

Java Developer

- Developed backend services for web applications using Java and Spring Boot, ensuring robust and scalable architecture.
- Implemented microservices, integrated caching with Redis, and enabled advanced search features with Elasticsearch.
- Optimized database queries and backend workflows to improve application performance.
- Worked closely with front-end developers and cross-functional teams to deliver seamless application features
- Adhere to SOLID Principles in coding practices
- Deploy and manage many web application to AWS

myproperly,Malaysia,(Remote)

JUNE 2022 - JUNE 2023

Mean Stack Developer

- Built interactive frontend interfaces using Angular and connected them with Node.js/Express.js backend services.
- Developed real-time features such as chat functionality using WebSocket technology.
- Implemented JWT-based authentication and user data management with MongoDB.
- Focused on creating responsive, user-friendly UI/UX while collaborating closely with designers and backend developers.
- Participated in integration, testing, and debugging to ensure stable and efficient applications.
- Deploy and manage many web application to AWS

PROJECTS

TAMTracker

<https://tamtracker.io>

Languages & Technologies: Nestjs, React, TanStack Start, Hono.js, Node.js, PostgreSQL, Drizzle ORM, AWS, Better Auth, Stripe API

- Developed a B2B market intelligence platform (TAMTracker) enabling businesses to analyze and track their Total Addressable Market (TAM) through automated data

integrations.

- Built a monorepo architecture with separate user-facing and agency-facing frontends, and a Hono.js REST API deployed on AWS Lambda.
- Implemented background job pipelines (SQS + ECS) to sync third-party integrations including LinkedIn Ads, HubSpot CRM, and IP-based website visitor tracking.
- Engineered multi-tenant authentication with role-based access for individual companies and agency partners.
- Designed Drizzle ORM/PostgreSQL data models to track company signals, engagement events, and usage quotas.
- Integrated Stripe billing with usage-based quota enforcement across subscription plans.
- Built real-time dashboards using React Query to surface intent signals and TAM insights.

HMS AI Agent

<https://health.techvention.ae>

Languages & Technologies: NestJS, Prisma, PostgreSQL (pgvector), JavaScript, OpenAI, RAG (Retrieval-Augmented Generation), Vector Databases(Milvus)

- Developed an AI-powered agent for the Hospital Management System to assist staff and patients.
- Built a RAG pipeline with pgvector and Prisma for fast, secure retrieval of hospital data.
- Created a knowledge base enabling LLMs to provide insights while querying only internal databases.
- Integrated with NestJS backend to support real-time access to patient data, doctor schedules, and resources.
- Enabled appointment booking via conversational AI, allowing patients to schedule or check availability.
- Maintained continuous updates to the vector store and supported multi-role queries for doctors, nurses, receptionists, and patients.

Hospital Management System

<https://health.techvention.ae>

Languages & Technologies: NestJS, Prisma, PostgreSQL (pgvector), JavaScript, ReactJS

- Developed a comprehensive HMS managing patients, doctors, appointments, lab tests, OT scheduling, pharmacy, inventory, and billing.
- Built dynamic backend modules with NestJS and Prisma for appointments, vitals, OT management, billing, refunds, discounts, profit/loss, tax, and report generation.
- Developed responsive frontend dashboards for admins, staff, doctors, and patients using ReactJS.
- Implemented doctor scheduling, resource management (wards, rooms, ICU, ER), and dynamic appointment creation.
- Enabled multi-role access control, multilingual support, and JWT authentication for secure and efficient system access.
- Ensured real-time updates so all changes in patient records, scheduling, and billing are instantly reflected.

Epoxy CMS

<http://dev-server.techvention.ae>

Languages & Technologies: Node.js, NestJS, Prisma, PostgreSQL, React

- Developed a content management system (CMS) website with a dynamic admin

dashboard for managing website content.

- Built modules to add, update, and delete content, with real-time updates reflected on the website pages.
- Implemented role-based access control to manage different user permissions efficiently.
- Designed responsive and user-friendly frontend pages to display content dynamically.
- Ensured data integrity and performance by integrating backend APIs with the dashboard.

Voice-to-Text Patient-Doctor SOAP Notes System

Languages & Technologies: Node.js, Express.js, JavaScript, MongoDB, MySQL, Web Speech API, OpenAI Whisper, OpenAI GPT API

- Designed and developed a web application that converts doctor-patient conversations into text in real-time using OpenAI Whisper for speech-to-text transcription.
- Implemented a NLP-based module with GPT API to automatically analyze the transcribed conversation and generate structured SOAP notes (Subjective, Objective, Assessment, Plan).
- Built an intuitive dashboard for doctors to view, edit, and save SOAP notes linked to patient records.
- Ensured role-based access control, allowing only authorized medical staff to access or modify patient notes.
- Integrated a search and filtering system for past SOAP notes, enabling quick reference and review of patient history.

Logihub

<https://website.dev.logihub.sa/en#contact>

Languages & Technologies: NestJS, Prisma, PostgreSQL, JavaScript, Redis

- Developed and maintained a robust logistics platform with modular NestJS backend and React frontend.
- Implemented JWT-based authorization, role-based access control, and secure API integrations with third-party services like Routech, Zoho, and Al-Rajhi payment gateway.
- Utilized Prisma ORM and relational databases for optimized data handling and Redis for caching and session management.
- Built responsive APIs, efficient workflows, and shipment tracking modules, ensuring high performance and reliability.
- Collaborated with cross-functional teams and conducted unit/integration testing for stable and maintainable code.

Banking Application

Languages & Technologies: Java, Spring Boot, Spring Security, JWT, Elasticsearch, Redis, MySQL/H2, Zuul, Zipkin, React

- Designed and implemented robust and scalable web applications using Java and Spring Boot.
- Utilized Spring Boot and JWT for secure authorization and authentication.
- Leveraged Elasticsearch for advanced search and analytics capabilities.
- Implemented microservices architecture with Zuul for routing and Zipkin for distributed tracing.

- Enhanced performance using Redis caching and in-memory storage.
 - Collaborated with front-end developers and UX/UI designers for seamless integration.
 - Addressed challenges in development, debugging, and performance optimization.
 - Conducted unit and integration testing to ensure application stability.
 - Stayed updated with latest trends in Java, Spring Boot, microservices, Elasticsearch, Redis, and distributed tracing.
 - Focused on creating a responsive and intuitive user experience.
 - Provided comprehensive documentation for codebase and architecture.
-

myProperly

Languages & Technologies: Angular, Node.js, Express.js, TypeScript, JavaScript, MongoDB, WebSocket, JWT, HTML5, CSS

- Developed and maintained responsive and user-friendly web applications using Angular and TypeScript.
 - Implemented reusable components and services to enhance code modularity and readability.
 - Integrated RESTful APIs with Node.js/Express.js for efficient data handling.
 - Collaborated with design and product teams to create intuitive UI/UX and integrate frontend with backend services.
 - Implemented real-time chat functionality using WebSocket technology.
 - Developed user authentication and authorization with JWT.
 - Utilized MongoDB for efficient data storage and query optimization.
 - Conducted unit, integration, and load testing to ensure stability and performance under heavy traffic.
 - Actively participated in code reviews, Agile/Scrum meetings, and daily stand-ups to maintain quality and track project progress.
-

Hotel Management System

Languages & Technologies: Express.js, React.js, Node.js, MongoDB, MySQL, Bootstrap, HTML5, CSS

- Developed a comprehensive web-based Hotel Management System to streamline hotel operations.
 - Built a responsive frontend with React.js and a scalable backend with Node.js/Express.js.
 - Implemented role-based authentication to secure sensitive data.
 - Developed reservation and booking modules for searching rooms, making bookings, and viewing details.
 - Designed a real-time admin dashboard for monitoring occupancy, guest feedback, and invoicing.
 - Conducted unit and end-to-end testing to ensure system reliability and performance.
-

Final Year Project

SEPTEMBER 2022 - JUNE 2023

Languages & Technologies: React.js, Node.js, Express.js, MongoDB

- Developed a web platform for students to interact with teachers, join seminars/bootcamps, and hire teachers for courses.
- Implemented a secure, role-based authentication system for students and teachers, with profile management and availability tracking.

- Built a responsive and scalable frontend with React.js and backend with Node.js/Express.js.
 - Integrated a rating, review, and recommendation system using collaborative filtering for personalized student experience.
 - Enabled seminar and bootcamp registrations directly through the platform.
 - Collaborated with team members for seamless frontend-backend integration and conducted unit and user acceptance testing for reliability.
